

“Quality is cheaper for us in the long run.”

“It is important to us to have a fully functional filter that ensures compliance with Euro VI standards – and one that lasts as long as possible. The filters cleaned by Mercedes-Benz guarantee us this at a really reasonable price. This makes economic sense for our trucking company on all counts.”

Manfred B., workshop manager

The advantages of Mercedes-Benz Genuine Remanufactured Diesel Particulate Filters at a glance:

- ✓ Attractive price – in a set with all required parts
- ✓ Short downtimes – thanks to the exchange process
- ✓ Full performance efficiency – identical to a new part
- ✓ Optimal fuel economy – optimal engine performance
- ✓ Long and predictable maintenance intervals

Diesel Particulate Filters as Genuine
Remanufactured Parts for Mercedes-Benz Trucks
certified to Euro VI standards.

Mercedes-Benz

All that counts: a fully functional Diesel Particulate Filter.

A Diesel Particulate Filter makes sure that the exhaust gases are purified effectively from particles, and thereby ensures compliance with statutory Euro VI emission standards. If the Diesel Particulate Filter is not working properly, this can cause other problems in addition to non-compliance with emission limits: Fuel consumption increases and engine performance suffers, because the engine is not operating efficiently. In addition, it may result in unplanned workshop visits or even in vehicle breakdowns.

When the Diesel Particulate Filter is full and can no longer be regenerated while on the road, we have the perfect solution for you: the Mercedes-Benz Genuine Remanufactured Diesel Particulate Filter – a time-saving solution at an attractive price.

Your “Full Service Package” for full economic efficiency.

The Mercedes-Benz Diesel Particulate Filter as a Genuine Remanufactured Part ensures compliance with EURO VI emission standards, and does so in an especially efficient and economical way:

- ✓ **Attractive package price**
Cleaning of the filter means you don't have to spend money on buying a new Diesel Particulate Filter. This saves resources and lowers your costs. The price also includes all parts needed for swapping the filters.
- ✓ **Short downtimes**
The exchange process means the new filter is ready for immediate installation. There are no downtimes caused by the full filter being sent in for cleaning. Thanks to testing of the entire component, our filters offer a precise fit and fast installation.
- ✓ **High functionality**
The highly specialized cleaning process ensures the highest purification levels and thus the full performance efficiency of a new part – and this means:
 - **Optimal fuel economy with optimal engine performance** – thanks to low exhaust back pressure
 - **Long, predictable maintenance intervals** – up to 700,000 km with just one complete cleaning.*
- ✓ **Mercedes-Benz guarantees**
High quality and performance of the Mercedes-Benz Genuine Remanufactured Diesel Particulate Filter. Rely on the unique know-how of your vehicle's manufacturer.

99.98 % efficiency without damages!

Mercedes-Benz has developed a special cleaning and testing process for its own Diesel Particulate Filters – for full performance with a filtration efficiency of 99.98 percent:

- ✓ **Gentle cleaning**
Our low-temperature process does not use hard blasting abrasives or aggressive chemicals, and fully preserves the catalytic coating and filtration performance. As a result, it ensures compliance with the statutory emission standards.
- ✓ **Complete surface treatment and leak test**
Completely smooth surfaces ensure the tightness of the exhaust system and thereby compliance with emission limits.
- ✓ **Testing under full load**
Each Diesel Particulate Filter is tested extensively under full load using highly-specialized equipment. This guarantees the full performance of every filter.
