

# Factory overhauled transmissions – with the know-how of professionals.

A factory overhaul of the transmission is the economical alternative to replacement, as the overhaul takes current value into account. Only those parts are replaced which are worn or damaged. We work with the same care and according to the same stringent quality criteria as with Genuine Remanufactured transmissions.

- The overhaul takes all technological and quality-related improvements into account. Parts whose function or operating life is optimized by quality-related product improvements are replaced, resulting in a positive effect on the value retention of your vehicle.
- You benefit from shorter downtimes thanks to rapid availability. Almost all variants are available immediately. Simply place an order with your Mercedes-Benz company-owned sales and service outlet or an authorized Mercedes-Benz Service Partner.
- So many advantages are worth warranting: 1 year for commercial and 2 years for private use – in both cases with no mileage limitation.

In some markets the costs of a factory overhaul can be set on the basis of the damage. There are 3 alternatives depending on the urgency and the extent of required repairs:

## “Individual” factory overhaul

The most economical solution for price-conscious customers.

- Your transmission is individually overhauled by the manufacturing plant.
- 

## “Standard” factory overhaul

The most suitable solution for most customers.

- Advance delivery of an already overhauled transmission specifically for your vehicle.
  - Delivery time: 2 to 5 working days.
- 

## “Express” factory overhaul

The particularly quick solution for customers in a hurry.

- Advance delivery of an already overhauled transmission within 24 hours.
- Express service at an attractive price.
